DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In particular, claim 1 recites:

wherein D_m is smaller than D_o , and by making D_g smaller than D_o and D_o equal to D_p , D_m obtained by $D_m = D_o \cdot \cos \theta$ is increased, where D_m represents a diameter of the slanting main passageway, D_o represents a diameter of the opening passageway, D_g represents an inside diameter of the gasket, D_p represents an inside diameter of the gasket holding annular ridge, and θ represents an angle the butting end face makes with a longitudinal direction of the slanting main passageway.

However, support for this additional claim limitation cannot be found in the specification, including page 8 of the instant application.

Claim Rejections - 35 USC § 102

Claim 1 is rejected under 35 U.S.C. 102(e) as being clearly anticipated by US patent 5967489, Nakazawa et al.

In regards to claim 1, in figure 2, Nakazawa et al discloses a fluid coupling comprising first and second coupling members having respective gasket holding

Art Unit: 3679

annular ridges on butting end faces thereof; and an annular gasket interposed between two coupling members, wherein each coupling member has a fluid channel comprising an opening passageway orthogonal to the butting end face thereof, and a slanting main passageway communicating therewith, and wherein D_m is smaller than D_o , and **by making** (not required) D_g smaller than D_o and D_o equal to D_p , D_m obtained by $D_m = D_o \cdot \cos \theta$ is increased, where D_m represents a diameter of the slanting main passageway, D_o represents a diameter of the opening passageway, D_g represents an inside diameter of the gasket, D_p represents an inside diameter of the gasket holding annular ridge, and θ represents an angle the butting end face makes with a longitudinal direction of the slanting main passageway.

Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 3679

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
